

Summary

Undergraduate Computer Science student with hands-on experience in machine learning and full-stack development, having built and deployed predictive models and web applications using Python, scikit-learn, Flask, and AWS. Demonstrated initiative through independently managing projects end-to-end, from development to cloud deployment. Looking to bring technical skills and a collaborative attitude to a meaningful software development or data internship.

Skills

- **Languages:** Python, JavaScript, C++, PHP
- **Databases:** MySQL, PostgreSQL
- **Frameworks:** Scikit-learn, XGBoost, CatBoost, Flask, HTML/CSS
- **Tools:** Git, GitHub, AWS Elastic Beanstalk, Jupyter Notebook, Pandas, NumPy

Projects

PHISHING URL DETECTOR – [GitHub](#) | [Live Demo](#)

May 2026

- Trained a Machine Learning Model 463,593 URLs across 22 URL-structure features with 92.10% accuracy, and 90.03% phishing recall
- Built a custom feature extractor analyzing raw URL strings without visiting the page
- Deployed a Flask web app with real-time verdict scoring, confidence percentage, and an explainability panel
- Validated features against real attack patterns and confirmed phishing URLs from PhishTank with a cybersecurity collaborator

HOUSE PRICES REGRESSION – [GitHub](#) | [Kaggle Competition](#)

May 2026

- Benchmarked 9 regression models (Linear, Ridge, Lasso, KNN, Decision Tree, Random Forest, AdaBoost, XGBoost, CatBoost) with **GridSearchCV** hyperparameter tuning to predict residential sale prices from 79 features
- Built a preprocessing pipeline with median imputation, standard scaling, and one-hot encoding using scikit-learn
- Achieved **15,550 RMSE** on the Kaggle public leaderboard, with **XGBoost** as the best-performing model (R^2 84.58%)
- Analyzed feature importance and residuals to validate model behavior across price ranges

STUDENT PERFORMANCE INDICATOR – [GitHub](#) | [Live Demo](#)

April 2026

- Built a full-stack web application using **Python** and **Flask** that predicts student math scores from academic and demographic inputs
- Applied problem-solving skills to compare and evaluate multiple ML algorithms to determine the most accurate model
- Structured a modular codebase with separate components for data processing, model training, and prediction pipeline
- Deployed the application to **AWS Elastic Beanstalk**, demonstrating initiative in taking the project from development to production

PORTFOLIO HUB – [GitHub](#) | [Live Demo](#)

November 2025

- Developed a full-stack web application using **PHP** and **PostgreSQL** that allows users to register, log in, and create publicly shareable resume profiles
- Implemented session-based user authentication with separate pages for login, registration, resume editing, and public resume viewing, applying real-world software development practices
- Independently designed and managed the full project structure, from database configuration to front-end rendering, demonstrating initiative and the ability to work across the stack

Education

BACHELOR OF SCIENCE IN COMPUTER SCIENCE – Batangas State University – Batangas City, Batangas August 2023 – 2027
GWA: 1.6393 (as of 3rd Year, 1st Semester) | Scale: 1.0 (Highest) – 5.0 (Failing)
